PRODUCT FLYER

eBusiness is catching on. Broadband technologies and multimedia applications are the rule rather than the exception. And storage space is at a premium. But it's about to become a lot less scarce. Introducing the Novell Device NAS—the hardware-independent, scalable storage system for your growing enterprise. The Novell NetDevice NAS takes care of all your data storage needs, freeing up bandwidth and servers.

The Novell NetDevice NAS can be deployed on your choice of hardware. Since it supports native storage access for virtually any client on your network, all of your Novell, Windows, Unix, Linux, and Web-based clients can access storage directly. It provides directory-based security, manageability, and reliability. And, as you'd expect from a Novell product, it helps integrate your storage into one Net.

CENTRAL STORAGE MANAGEMENT

Install one or more Novell NetDevice NAS appliances. Either way gives you the power to centrally manage and integrate all data storage, because NDS eDirectory™ is built right in. In fact, with eDirectory, location doesn't matter. Wherever you log in regardless of the type device or operating system you use, your files are readily accessible.

ASSURED SECURITY

More than a decade of security expertise is built in to the Novell NetDevice NAS. From the secure management port to the

granular Access Control Lists (ACLs) and encrypted data access methods, the Novell NetDevice NAS provides tools to ensure that only authenticated users have access to the system.

GLOBAL POLICY MANAGEMENT

All users, regardless of access method or physical location, can be centrally managed based on the policies enforced by NDS eDirectory. Plus, the Novell NetDevice NAS supports environments where islands of

users are managed through other name space formats, including Windows* Domain Controllers, Windows Workgroups, and Unix* Network Information Services (NIS).

AUTOMATIC SOFTWARE UPDATES

Novell makes it easy to manage an entire fleet of Novell NetDevice NAS appliances with revolutionary Softchip technology that allows the appliance to automatically upgrade itself. The administrator simply identifies a URL for the appliance to query at regular intervals for the Softchip update. The appliance automatically upgrades as soon as a new Softchip is available. The URL can point to a Novell Web site or an internal Web site to get the latest updates.

THE ZEN OF DATA DISTRIBUTION

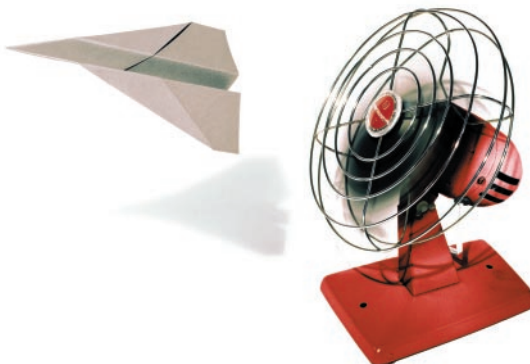

Combining Novell NetDevice NAS with Novell ZENworks™ for Servers allows administrators to automatically distribute content from a master server to any appliance. This means files, programs, and any other content can easily be disseminated throughout the network. Enterprises benefit from streamlined file sharing and data distribution.

SO EASY TO STORE SO MUCH

The Novell NetDevice NAS system snaps into your network for immediate raw storage. Certified hardware systems from top vendors let you stay with your vendor of choice, or even re-deploy existing hardware as a NAS appliance. Economical Novell NetDevice NAS appliances can be easily added to your network for additional storage—scaling as your needs grow. Hardware independence in your environment gives you complete flexibility and freedom of choice.

BRING YOUR COMPANY CLOSER TO ONE NET

By providing scalable storage to any network client on a wired or wireless LAN or WAN, and delivering centralized control of enterprise storage, the Novell NetDevice NAS reduces storage management costs. Moreover, it creates new opportunities to enhance collaboration inside the organization and integrate your enterprise systems. The result? A unified network, the essence of one Net.
